

CODE BREAKER - 1

A safe has a 4-digit code

--	--	--	--

Use the clues below to break the code

- 1 digit in the code is repeated. (only 1)
- The code is an even number.
- The 1st digit is prime.
- The 3rd digit is the same as one of the others.
- If I double the code it still has only 4 digits.
- The last digit has at least one line of symmetry. (if your handwriting is neat!)
- Two of the digits are odd.
- The 2nd digit is half of the fourth digit.

Please send your answers or hand them in to Miss Brookes by Tuesday 4th October
