FIRE PREVENTION POLICY

FIRE PREVENTION

The school takes all reasonable precautions to prevent a fire from breaking out and recognises that for a fire to take place oxygen, flammable materials and a source of ignition must all be present. The processes of prevention are aimed at preventing one or more of these elements being brought together.

To ensure the processes are being implemented the school will:

- Comply at all times with relevant regulations on the storage, transportation, handling and disposal of flammable materials (including weapons and ammunition, hazardous substances etc.)
- Regularly inspect all the areas where there are potential sources of ignition and ensure that no flammable materials are stored close by.
- Maintain awareness through training and refresher training of the preventative steps that need to be taken.
- Consult regularly with our Health and Safety External Advisor (Chris Moran from Glenn Webb Health & Safety) and Fire Safety Assessor (Chris Rowling from Newcross International)
- Include fire prevention and evacuation procedures during the induction process with all new starters.
- Pay close attention to the activities of contractors as appropriate. If considered necessary, a permit to work procedure will operate with regard to contractors working on site.
